

Stack-n-Plant

Self Watering Stackable Planting System

"Ideal for Gardens, Conservatories and Patios"

- High impact flowering displays
- Herb and kitchen gardens
- Tidy and compact
- Moisture retaining
- Anti waterlogging
- Use indoors or outside
- Choice of styles & colours

Stack-n-Plant

Self Watering Stackable Planters

Stack-n-Plant is a stackable planting system that is ideal for busy gardeners. When owners are away from home on warm weeks, valuable potted plants can be lost to dry weather conditions. To help resolve the dilemma Stack-n-Plant has produced planters that prolong moisture retention, whilst preventing waterlogging. Plants can be watered from the top and an overflow system distributes the water to the lower planting areas of the stack.

Stunning Floral Displays

The height of the stacked tower creates impressive floral displays that can be viewed easily. Even relatively small bedding plants can be used to build dramatic displays. The tower can be moved indoors or outside according to conditions. This helps gardeners extend their growing season, bringing on young plants earlier and protecting seed beds.

Herb or Kitchen Gardens

"Stack-n-Plant" is ideal for creating herb gardens or kitchen gardens, and produce can be located for ease of access from the kitchen. With strawberry towers, the fruit is kept clean and away from soil, minimising the risk of fruit rot damage. The compact stacked form helps to produce a high yield per m².

Fits Indoors or Out

The "Stack-n-Plant" system maximises growing space in a small garden, on a balcony or patio. With its small footprint, "Stack-n-Plant" towers fit neatly into conservatories, and can even be used for ornamental house plant arrangements.

The Stacking Concept

Pots come as a set of 3 with a base tray, and each pot has 3 planting sections, giving nine planting areas per pack and a spacious central area in the top pot. As everything is contained within a conveniently small footprint, the stacked tower can be brought inside to avoid frost damage, or extend the growing season. As the tower is in sections, it can be easily separated and reformed to make it easier to move.

Choice of Stackable Planters

There are two colours to choose from, Stone or Terracotta effect, and the pots are produced from a UV resistant material for lasting visual appearance and durability. The Pots are designed to be stacked three high. Where safe to do so, higher stacks are feasible.

Guide to Using the Planters

- Select plants and use a suitable multipurpose or potting
- Partially fill the Stack-n-Plant with the compost
- Position plants allowing for clearance with the pots above
- Place the plants in position and firm in with more compost
- The entire surface of the top pot is available for planting
- Locate the tray in its final position
- Ensure suitable light/shade conditions for the plants chosen
- Place the bottom planter on the tray
- Carefully place the middle planter offsetting it by 60 degrees
- Repeat for the top planter, in each case taking care to avoid
- It is easier and safer to work with a second person when

Two sizes in either Terracotta or Stone effect

How it Works

The Stack-n-Plant tower can be conveniently watered directly from the top surface. Controlled overflow points enable water to seep down to lower levels, preventing water-logging and dispersing water to feed plant roots throughout the stack.

Water is retained in base wells in the pots and this provides a controlled feed via the natural capillary action of the soil. The middle and lower sections have minimal exposure to the air, reducing evaporation from the soil. The Stack-n-Plant helps maintain a balance of moisture in the growing medium over a prolonged period, promoting healthy plant growth.

The watering system is particularly helpful to conservatory gardeners as it enables watering of all levels from the top, reducing spillage on the floor.

For the full benefits and best results always use a multi-purpose compost growing media or similar type with Stack-n-Plant.

Stack-n-Plant

Self Watering Stackable Planting System

Designed by Gardeners
for Gardeners

Stackable Planters: Two sizes in either Terracotta or Stone effect

Stackable Medium Pots

3 layer stacked height – 480mm. Footprint 406 x 382mm

Terracotta Medium

Each set consists of 3 Pots & 1 Tray

SRP: **£15.99** inc VAT
Product code: POTR0004

Stone Medium

Each set consists of 3 Pots & 1 Tray

SRP: **£15.99** inc VAT
Product code: POTR0008

Bulk Order

Each set consists of 30 Pots & 10 Trays

SRP: **£99.99** inc VAT
Product code: POTR0010

Bulk Order

Each set consists of 30 Pots & 10 Trays

SRP: **£99.99** inc VAT
Product code: POTR0020

Stackable Large Tubs

3 layer stacked height – 665mm. Footprint 583 x 570mm

Terracotta Large

Each set consists of 3 Tubs & 1 Tray

SRP: **£39.99** inc VAT
Product code: TUBR0004

Stone Large

Each set consists of 3 Tubs & 1 Tray

SRP: **£39.99** inc VAT
Product code: TUBR0008

Bulk Order

Each set consists of 15 Tubs & 5 Trays

SRP: **£129.99** inc VAT
Product code: TUBR0010

Bulk Order

Each set consists of 15 Tubs & 5 Trays

SRP: **£129.99** inc VAT
Product code: TUBR0020
